

Liam Andersson

INTRODUCTION

I am a driven software engineer who is passionate about technology's ability to improve lives. I rely on strong communication and teamwork to transform ideas into reliable solutions. I am committed to enhancing existing systems and mastering new technologies to deliver software that makes a real, valuable impact.

EDUCATION

Linköping University

Linköping, SWE

Master of Science in Computer Science & Software Engineering

- Specialization in 'Secure Systems'
- Cumulative Grade Average: $\approx 4.3/5$

EXPERIENCE

Netlight

Consultant

September 2026 – Present

Stockholm, SWE

- Work as an IT Consultant at Netlight across internal and external clients.

Ericsson

Global leader in telecommunications and networking

June 2025 – June 2026

Linköping, SWE

DevOps Engineer

January 2026 – June 2026

- Designed and built, together with a colleague, an automated GitLab CI/CD benchmarking pipeline that deploys and measures IaC frameworks (Terraform, Pulumi, Ansible), replacing preference-driven architecture decisions with hard performance data.
- Delivered a data-backed decision framework, validated with Cloud and DevOps stakeholders, that lets Ericsson choose the right IaC approach per project, and assessed the impact of declarative vs. imperative IaC on Developer Experience.

DevOps Engineer

August 2025 – January 2026

- Led the migration of secrets from Helm charts into HashiCorp Vault, building a Kubernetes-based system with runtime injection so credentials never touch code or configuration files, cutting leak risk and manual rotation work.
- Automated the process with scripts against the Kubernetes API and authored internal documentation that enabled other teams to adopt the solution.

AI Engineer

June 2025 – August 2025

- Drove the end-to-end design and deployment of a conversational RAG assistant (Python, FastAPI, Docker, OpenSearch, LangChain) that surfaces the most relevant internal documentation for a user's question, replacing slow manual searches.
- Engineered automatic failover between LLMs, keeping the assistant available even if a model goes down, and validated the tool against real needs with internal stakeholders.

Mindroad

Mobile Developer

June 2024 – August 2024

Linköping, SWE

- Designed and built a complete React Native course from scratch (curriculum, lectures, and hands-on projects mirroring real scenarios), reviewed by a senior developer, giving Mindroad a market-ready, reusable training offering.
- Contributed to a customer's website using HTML, CSS, and JavaScript, integrating a relational SQL database.

Confidential Client (Health Tech)

Full-Stack Developer

January 2024 – June 2024

SWE

- Built a cross-platform Flutter app that turned a medical digital twin, previously only a backend research tool, into an interactive prototype, giving the client the proof needed to evaluate the concept.
- Translated the client's Framer design into a working product with the designer and product owner, using MVVM architecture for maintainability and Firebase for real-time data sync.

Linköping University

Course Coordinator

Linköping, SWE

- Guided students in Android and cross-platform app development (Java, Kotlin, XML, Jetpack Compose, Flutter, React Native), strengthening their practical coding skills and project outcomes.
- Designed new lab assignments and course services, including a REST API hosted on Azure, that enhanced the learning experience.

PERSONAL PROJECTS

MNIST Classifier | *Python, NumPy, Matplotlib*

July 2025 – Aug. 2025

- Built a perceptron neural network from scratch, without ML frameworks, to classify handwritten digits, comparing different optimization techniques.

Game Engine | *C++, OpenGL, CMake*

July 2023 – Present

- Developing a 3D game engine from the ground up to master graphics programming, game loops, and resource management.
- Implemented rendering, input handling, and basic physics systems capable of running simple 3D games.

CartSync | *Dart, Flutter, FastAPI, Redis, Python, PostgreSQL*

Jan. 2025 – Present

- Building a cross-platform shopping cart synchronization app spanning mobile frontend and backend integration.
- Developed the Flutter frontend and a Python backend (FastAPI, PostgreSQL, Redis) for real-time data synchronization.

More projects available at github.com/dubstepzedd.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript/TypeScript, HTML/CSS, Dart, C#, Golang, Bash

Frameworks: React, Next.js, Angular, Flask, FastAPI, LangChain, Flutter, React Native, .NET

Infrastructure & DevOps: Kubernetes, Helm, Docker, HashiCorp Vault, Terraform, Pulumi, Ansible, GitLab CI/CD, Jenkins, Git

Databases: PostgreSQL, MySQL, Redis, Firestore, OpenSearch

Cloud Providers: Azure, Firebase, Cloudflare, AWS EKS & EC2, GCP GKE & GCE

Practices: Infrastructure-as-Code, RAG/LLM integration, WebSockets/SSE, Agile/Scrum, Unit testing
